The guide is divided into five main sections that address legal frameworks, service provision and frameworks, mandatory skills, teaching and training in forensic psychiatry and psychology, and capita selecta. In addition, recommendations are made with respect to the practice of teaching and training across European countries. It is anticipated that the guide will provide an excellent means of improving specific skills and that, by learning about the offender/patient pathways in the different jurisdictions of Europe, the reader will gain a deeper understanding of the principles that govern methods and practices in their own work with mentally disordered offenders.

Dozens of tables, illustrative figures, and real-life case examples summarize the vast data that continues to accumulate in five key areas: clinical concepts; risk factors for, and the etiology and impact of, personality disorders; treatment options across therapeutic modalities; special problems, populations, and settings, such as including suicidal be-
