The relation of fluid mechanics and continuous mechanics has been discussed by Bar-Meir (2008). In fluid mechanics, the continuous domain does not hold certain shapes and geometry like solids, and in many applications, the density of fluid varies with time and position. Fig. 10.1 has shown some common problems involved in fluid mechanics. In this chapter, we will discuss the FEA modeling of some basic problems including pipe flow, laminate flow, and groundwater flow.
