Hi, I have built a FRAMEBUFFER image fsl-image-gui following the instructions in "Freescale Yocto Project Users Guide" "Rev 0, 12/2015" (linux-3.14.52-1.1.0-ga release). I want to know how can I build the SDK? What is the bitbake target to generate the poky-sdk script? Regards, Pj

#### [EPUB] Freescale Yocto Project Users Guide Users Guide

Freescale Yocto Project User's Guide, Rev L3.10.17\_1.0.0-ga, 05/2014 Freescale Semiconductor, Inc. 3 The recommended minimum Ubuntu version is 12.04 or later. Earlier versions may cause the Yocto Project build setup to fail, because it requires python versions only available starting with Ubuntu 12.04.

#### fsl-image-gui has no GUI on iMX 6UL? - NXP Community

- Freescale Yocto Project User's Guide (IMXLXOCTOUG) - Contains the instructions for setting up and building Linux OS in the Yocto Project. • i.MX Linux® Reference Manual (IMXLXRM) - Contains the information on Linux drivers for i.MX. • i.MX 6 Graphics User's Guide (IMX6GRAPHICUG) - Describes the graphics used.

#### Yocto Project Mega-Manual

During the setup environment process of the Freescale Yocto Project Community BSP, the NXP End User License Agreement (EULA) is displayed. To continue to use the i.MX Proprietary software, users must agree to the conditions of this license. The agreement to the terms allows the Yocto Project build to untar packages from the i.MX mirror.

The Freescale Yocto Project BSP Release directory contains a "sources" directory, which contains the recipes used to build, one or more build directories, and a set of scripts used to set up the environment. The recipes used to build the project come from both the community and Freescale.
