Leo Angart is a business consultant, author and trainer. Having worn glasses for

more than 25 years he writes from personal experience. It has now been more than 19 years since he threw away his glasses. In this follow up to Improve Your Eyesight Naturally, Leo concentrates on curing presbyopia, the inability to focus on near objects. He explains what presbyopia is and how you can tone your eye muscles, release tension and build up energy in order to regain your natural eyesight. Vision Training is based on the presupposition that clear vision is a natural state and you can achieve natural clear vision via simple exercises. If your device does not recognise the videos in this title, they are available for separate download.

Marilyn Roy developed the EyeRobics system after successfully correcting her own deteriorating eyesight at age 47. This eye-fitness manual shows us that the need for glasses is not inevitable as we grow older; we can in fact prevent deterioration and alleviate existing problems with simple exercises which both stimulate and relax the eye muscles. With a range of visual games and practical advice on how to minimize the problems of computers and close reading, Marilyn Roy takes us through a unique

eye-fitness program.

Object Lessons is a series of short, beautifully designed books about the hidden lives of ordinary things. Desert nomads tested their vision by distinguishing a pair of stars. But we have since created more disquieting ways to test the strength of the eyes. Reading the eye chart is an exercise in failure, since it only gets interesting when you cannot read any further. It is the opposite of interpretative reading, like one does with literature. When you have finished reading an eye chart, what exactly have you even read? From a Spanish cleric's Renaissance guide to testing vision, to a Dutch ophthalmologist's innovation in optical tech, to the witty subversion of the eye chart in advertising and popular culture, William Germano's Eye Chart lets people see the eye chart at last. Object Lessons is published in partnership with an essay series in The Atlantic.

- Includes 1 hour & 30 minute video tape with 16 easy to follow eye exercises plus eye chart to plot your progress.

Vision for Life presents an approach to eye health for people with 20/20 vision who wish to maintain their perfect vision as well as people who see poorly and would like to improve their eyesight. Clients of the Meir Schneider Self-Healing Method experience their own capacity to bring about recovery, reversing the progress of a wide range of degenerative conditions including eye disease. Based in part on the established Bates Method of eyesight improvement and in part on his own professional and personal discoveries, Meir Schneider's pioneering approach has helped thousands of people successfully treat a host of eye problems, including near- and farsightedness, astigmatism, lazy eye, double vision, glaucoma, cataracts, macular degeneration, retinal detachment, retinitis pigmentosa, and nystagmus. This revised edition includes a new chapter on children's eye health and new research and exercises for specific conditions, i.e., glaucoma and nystagmus, near- and farsightedness. Born blind to deaf parents, Schneider underwent a series of painful opera-

tions as a young child and was left with 99 percent scar tissue on the lenses of his eyes, resulting in his being declared incurably blind. At the age of seventeen, he discovered how to improve his vision from less than 1 percent to 55 percent of normal vision with the eye exercises presented in this book. Today Schneider drives a car, reads, and enjoys the benefits of full natural vision. He and his clients prove time and time again how much vision can improve with exercise. His contributions to the field of self-healing are recognized by alternative health practitioners and medical doctors alike. In Vision for Life, Schneider shares forty years of discoveries made on his personal and professional journey. The book details simple but effective techniques to gain great vision such as sunning and palming. Such exercises are not only strengthening but also restorative and deeply relaxing. The reader learns how to reverse developing issues before they cause damage or to remedy existing problems, including pathologies such as glaucoma, cataracts, macular degeneration, retinal detachment, and optic nerve neuropathy.

Many texts address the physical examination component of health assessment, but do not cover the diagnostic reasoning process that a health care provider must go through when assessing an actual case. In the Second Edition of *Advanced Health Assessment and Diagnostic Reasoning*, authors Rhoads and Petersen do just that. By including each step of health assessment, they demonstrate the links between health history and physical examination, and offer the healthcare provider with the essential data needed to formulate a diagnosis and treatment plan. Furthermore, the content in *Advanced Health Assessment and Diagnostic Reasoning, Second Edition* is accessible and presented in a way that is easy to follow and retain. Key Features & Benefits • Three introductory chapters cover general strategies for health history taking, physical examination, and documentation, and the remaining chapters cover clinical aspects of assessment, and

focus on various systemic disorders (e.g., gastrointestinal, cardiovascular, musculoskeletal). • Aspects of the health history are presented in two columns. The first column gives the type of information that the provider should obtain, and the second column provides specific questions or information to note and gives examples of what conditions the findings may indicate. • Aspects of the physical examination are presented in two columns. The first column gives the action, and the second column lists normal and abnormal findings, and possible diagnoses associated with those findings. • Every clinical chapter contains a “Differential Diagnosis of Common Disorders” table. This table summarizes significant findings in the history and physical exam and gives pertinent diagnostic tests for common disorders. • Every clinical chapter also includes “Assessment of Special Populations.” This section highlights important information on assessing pregnant, neonatal, pediatric, and geriatric patients. • Case studies are integrated into each chapter. These case studies recount a patient’s history and provide sample documentation of the history and physical examination. The sample documentation fa-

miliarizes students with proper and complete documentation and use of forms, and is complete with a final assessment finding or diagnosis.

This concise nursing resource presents the health assessment steps in an easy-to-use, two-column format to emphasize the contrast between normal and abnormal findings. Good vision is more than the ability to see 20/20 on an eye chart. Any vision problem is a message alerting us to an unbalanced inner state. Eyeglasses, medications, and surgery may correct poor vision but they cannot correct this inner imbalance. In The Power Behind Your Eyes, Robert-Michael Kaplan presents Integrated Vision Therapy a comprehensive daily program that can actually improve as well as treat the inner causes of poor vision. More comprehensive than other vision care techniques, Integrated Vision Therapy takes a holistic approach to identifying the causes of vision problems and developing noninvasive, natural strategies for treatment, including clear, easy-to-follow exercises, diets, and changes in daily habits.

The eye chart—essential diagnostic tool, template, sign, toy—is a monument to unreading and a guide to the absurdities of modern life.

Leo Angart runs workshops all over the world, helping people to regain their natural vision and throw away their glasses for good. He regularly encounters children whose eyesight is being adversely affected by their glasses or who don't really need glasses at all. In *Magic Eyes: Vision Training for Children* Leo shares his experience and explains what you can do to help transform your child's eyesight, eliminating the need for glasses. In *Magic Eyes* Leo Angart demystifies common eye conditions, explains the causes of these issues and suggests simple solutions you can try at home. These fun exercises can make children's eyes healthy and strong and eliminate the need for glasses. In fact with children it is actually quite easy to restore natural eyesight within a week or two. *Magic Eyes* also contains detailed explanations of, and exercises for: amblyopia (or lazy eye), anisometropia (when vision is different between the left and right eye), astigmatism (irregular shaping of the cornea), diplopia (double vision), hyperopia (far-

sightedness), myopia (near-sightedness) and strabismus (turning in or out of the eye).
