List of skin conditions - Wikipedia

Many conditions affect the human integumentary system—the organ system covering the entire surface of the body and composed of skin, hair, nails, and related muscle and glands. The major function of this system is as a barrier against the external environment. The skin weighs an average of four kilograms, covers an area of two square metres, and is made of three distinct layers: the ...

Infective and infiltrative causes are rare, but important to identify,as many are potentially reversible. Access to the complete content on Oxford Medicine Online re-

quires a subscription or purchase. Public users are able to search the site and view the abstracts for each book and chapter without a subscription.

Some infiltrative cardiac diseases increase ventricular wall thickness, while others cause chamber enlargement with secondary wall thinning. Increased wall thickness, small ventricular volume, and occasional dynamic left ventricular outflow obstruction (e.g., amyloidosis) can outwardly appear similar to conditions with true myocyte hypertrophy (e.g., hypertrophic cardiomyopathy, hypertensive heart disease).

Infiltrative and Infective Conditions Major Following ...

If you have ruled out an infectious etiology, be on the lookout for several sterile infiltrative events: You should begin by examining the company the infiltrate keeps—lid margin disease and blepharitis are often found in conjunction with non-infectious infiltrates. • Marginal corneal infiltrates. These are caused by non-infectious conditions.

Infiltrative is an important feature that pathologists look for when trying to decide if a tumour is benign (non-cancerous) or malignant (cancerous). Non-cancerous tumours can become larger but the cells usually do not infiltrate the surrounding normal tissue.

Infective and Infiltrative Cardiomyopathies
Infiltrative cardiomyopathies are characterized by the deposition of abnormal substances that cause the ventricular walls to become progressively rigid, thereby impeding ventricular filling. Some infiltrative cardiac diseases increase ventricular wall thickness, while others cause chamber enlargement with secondary wall thinning.

Non-infiltrative and Infiltrative Lipomas. Lipomas are given two major classifications non-infiltrative and infiltrative. Non-infiltrative lipomas are also known as simple lipomas. They are located beneath the skin and are quite easy to remove. Infiltrative lipomas in dogs on the other hand tend to grow into adjacent tissues.

Conditions with a high number of publications: mitral valve prolapse (112 studies), prior infective endocarditis (96) and bicuspid aortic valve (78) were the most commonly described heart conditions predisposing for infective endocarditis. Conditions with a medium number of publications: These included aortic valve stenosis (46 studies), mitral ...

Infective and infiltrative causes of heart failure ...

Lung disorders such as pneumonia, silicosis, asbestosis and cystic fibrosis often cause the air sacs or alveoli to fill with fluids comprised of white blood cells, cancer cells, pus, proteins or blood. These substances are called infiltrates.

Depending on the severity of the condition, these infiltrates can involve a small area of the lung causing minor symptoms or completely fill an entire region of the lung causing a serious, life-threatening condition.
