Oracle Database on AWS - Quick Start

Oracle Data Guard is used for quick recovery between these sites. The primary site also has a secondary database for reporting and other uses. There are two approaches for this setup. Approach 1: Direct connections between on-premises and Azure, requiring open TCP ports on the firewall.

The Quick Start deploys the Oracle primary database (using the preconfigured, general-purpose starter database from Oracle) on an EC2 instance in the first Availability Zone. It then sets up a second EC2 instance in a second Availability Zone, copies the primary database to the second instance, and configures Oracle Data Guard.
