The patent system is based on "one-patent-per-product" presumption and therefore fails to sustain complex follow-on innovations that contain a number of patents. The book explains that follow-on innovations may be subject to market failures such as hold-ups and excessive royalties. For decades, scholars have debated whether the market problems can be solved with voluntary licensing i.e., open innovation, or with compulsory liability rules. The book concludes that neither approach is sufficient. On the one hand, incentives to engage in open innovation practices involving patents are insufficient. On the other hand, the existing compulsory liability rules in patent and competition law are not tailored to address follow-on innovator's interests. To transcend this problem, the author proposes a compulsory liability rule against the suppression of follow-on innovation, that paradoxically, fosters early-on voluntary licensing between patent holders and follow-on innovators. The book is aimed at patent and competition law scholars and practitioners, patent attorneys, managers, engineers and economists who either engage in open innovation involving patents or conduct research on the topic. It also offers insights to policy and law-makers reviewing the possibilities to foster open innovation initiatives or adapt the scope of patent remedies or employ compulsory licenses for patents.

Covers receipts and expenditures of appropriations and other funds.

The volume reproduces the materials of the roundtable debate which examined the interaction between competition law and intellectual property law. The workshop participants - a group of senior representatives of the Commission and the national competition authorities of some EC Member States, reknowned international academics and legal practitioners - discussed the economic and legal issues that arise in this particular area of application of the EC competition rules, under the following headings: 1) whether the characteristics of intellectual property products/markets justify special treatment under the competition rules; 2) a critical assessment of the Block Exemption Regulation and corresponding Guidelines recently adopted in this area of EC competition law enforcement; 3) the specific enforcement issues that arise in relation to patent pools and collecting societies; and 4) specific problems related to IP in the domains of merger control and application of Article 82 EC.

.NET Windows Forms are a new programming paradigm introduced with Microsoft's .NET initiative. Windows Forms are very similar to Web Forms, which allow programmers to build complex Web application interfaces easily, sharing the same underlying framework and programming concepts. Windows Forms, however, are used for the Win32 platform, instead of the Internet, and allow programmers to build traditional Windows desktop-based applications structured around .NET. Sams Teach Yourself .NET Windows Forms in 21 Days covers all the major aspects of Windows Forms necessary to build professional, functional applications. This book follows the tried-and-tested 21 Days tutorial model to guide the reader through Windows Forms. It features code examples and tips for programmers migrating from pre-Windows Forms Microsoft technologies. The reader will be introduced to the many controls available for .NET Windows Forms and how to build them, learn how to create events and event handlers, explore ADO.NET and methods to retrieve data from dynamic data sources, and learn how to take advantage of the Internet and Internet Explorer from their .NET Windows Forms applications. As readers advance through the tutorials, they progress toward more advanced topics and projects by creating simple graphical applications and enhancing existing ones, learn how to integrate with other .NET applications, use Web services, build Windows services, build Windows Forms controls, create multi-threaded applications, work with COM and COM+ configure and deploy .NET Windows Forms, and how to de-bug .NET Windows Forms.

The purpose of this book is to examine the experience of a number of countries in grappling with the problems of reconciling the two fields of competition policy and intellectual property rights. The first part of the book indicates the variation in legislative models as well as the wide variety of judicial and administrative doctrines that have been used. The jurisdictions selected for study are the three

major trading blocks with the longest experience of case law (the EU, the USA and Japan) and three less populous countries with open economies (Australia, Ireland and Singapore). In the second part of the book we look at a number of issues closely related to the interface between competition law and intellectual property rights. Separate chapters analyse the issue of parallel trading and exhaustion of IPRs, the issue of technology transfer, and the economics of the interface between intellectual property and competition law.

All are agreed that the digital economy contributes to a dynamic evolution of markets and competition. Nonetheless, concerns are increasingly raised about the market dominance of a few key players. Because these companies hold the power to drive rivals out of business, regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs. This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access data on online platforms such as search engines, social networks, and e-commerce platforms – commonly referred to as the ‘gatekeepers’ of the Internet. The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a ‘refusal to deal’ and lead to competition law liability under the so-called ‘essential facilities doctrine’, according to which firms need access to shared knowledge in order to be able to compete. A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation considering that the required information may include personal data of individuals. Building on the refusal to deal concept, and using a multidisciplinary approach, the analysis covers such issues and topics as the following: – data portability; – interoperability; – data as a competitive advantage or entry barrier in digital markets; – market definition and dominance with respect to data; – disruptive versus sustaining innovation; – role of intellectual property regimes; – economic trade-off in essential facilities cases; – relationship of competition enforcement with data protection law and – data-related competition concerns in merger cases. The author draws on a wealth of relevant material, including EU and US decision-making practice, case law, and policy documents, as well as economic and empirical literature on the link between competition and innovation. The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data. In addition, it makes suggestions as to how data protection interests can be integrated into competition policy. An invaluable contribution to ongoing academic and policy discussions about how data-related competition concerns should be addressed under competition law, the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms. It will be of immeasurable value to the many jurists, business persons, and academics concerned with this very timely subject.

Global Media Giants takes an in-depth look at how media corporate power works globally, regionally, and nationally, investigating the ways in which the largest and most powerful media corporations in the world wield power. Case studies examine not only some of the largest media corporations (News Corp., The Microsoft Corporation) in terms of revenues, but also media corporations that hold considerable power within national, regional, or geolinguistic contexts (Televisa, The Bertelsmann Group,

Sony Corporation). Each chapter approaches a different corporation through the lens of economy, politics, and culture, giving students and scholars a thoughtful and data-driven guide with which to interrogate contemporary media industry power.

This book brings satisfying definition and clarity to this field at last. Exploring the substantive differences between competition law and sector-specific regulation after the methodological integration, it presents the first detailed analysis of the many hundreds of notifications and Commission letters generated under the Article 7 procedure, identifying the most relevant cases dealing with market definition, market power, and remedies. It compares these decisions with relevant competition law cases and highlights elements with a bearing on sector-specific regulation. It also offers hugely valuable guidance through the vast amount of documents in the Commission's CIRCA database. Topics and issues raised include the following: definition of product markets; delineation of geographic markets (including sub-national); different practices in relation to assessing single market power and collective market power; and competition problems such as refusal to deal, margin squeeze, non-price discrimination, and excessive pricing. There can be little doubt that this is the new reference point for researchers and practitioners in this domain. By systematically categorizing the concepts and legal criteria and building a solid theoretical framework on the intersection of competition law and sector-specific regulation, the author has created a resource that is sure to be welcomed by all those involved in regulation of electronic communications markets and network industries in general: academic scholars, telecommunications regulators at the EU and Member State levels, competition authorities, law firms specializing in IT/communications law, practitioners in IT and telecommunications companies, and consultants in the sector. The book will also prove very useful for scholars and practitioners in other parts of the world interested in comparing the EU system with their own.

Under the auspices of the Max Planck Institute for Intellectual Property and Competition Law (now the Max Planck Institute for Innovation and Competition). And Institutum Iurisprudentiae, Academia Sinica, a group of twenty scholars from around the world gathered to study the experiences made with regards to compulsory licensing. The results are demonstrated in this book. Different articles analyze how the international conventions on intellectual property may be interpreted and explore the related doctrinal groundwork surrounding compulsory patent licensing and beyond. It is shown how the compulsory licensing regime could be transformed into a truly workable mechanism facilitating the speedy use and dissemination of innovation and other subject matters of protection.

Striking a proper balance between unilateral exercise of intellectual property rights on the one hand and competition rules on the other hand is not an easy exercise. The right owners' unilateral behaviour of refusal to license is one such delicate issue, particularly for China, considering that it has not been clarified within existing competition rules how to assess a right owner's specific unilateral practices. In a series of cases, the EU courts have established the exceptional circumstances in which the right owners' refusal conduct might be considered as an infringement of EU competition rules. In general, Chinese competition law has been modelled after the EU competition rules. This book firstly examines the EU approaches on dominant undertakings' refusal to license intellectual property rights and the follow-on pricing issue, and then explores to what extent the EU model could contribute to China's anti-monopoly practice.

Economic analysis rarely appears on the judicial horizon in intellectual property litigation. In competition cases, by contrast, economists are familiar figures in the courtroom and the language of economics is scattered throughout the judgments of even the highest courts. One might expect, therefore, that refusals to license intellectual property would generate the same fruitful symbiosis between law and economics when those refusals surface in competition proceedings. This however, has not been how the law on this subject has developed in most jurisdictions. Courts and enforcement agencies faced with a unilateral refusal to license have instead tended to retreat into sketchily articulated black letter rules and presumptions which then have to be fenced off from the rest of

competition law by economically irrelevant qualifications and distinctions based on private law categorisations of, and rationales for, individual intellectual property rights. This bypassing of case-by-case analysis in favour of more traditional modes of legal reasoning is not entirely the fault of lawyers. Economists have contributed to this state of affairs by urging judges and regulators to convert empirically undernourished theories about the proper role of intellectual property in a market economy into rules of law and evidentiary presumptions intended to be binding in future cases. How this came about and what it means for the future of effective competition enforcement globally are the twin concerns of this book.

New to this edition: --

Monti explores the development of EC competition law through an interdisciplinary approach, focusing on the political and economic considerations that affect the way the rules are interpreted. Written with competition law students in mind, it should also be of interest to undergraduate and postgraduate students of EU politics and economics.

In this outstanding new book Professor Keith Hylton and his collaborators examine what antitrust law has become over the past ten years, a time in which economic analysis has become its undisputed core. What has become of the old antitrust doctrine, what are the new issues for the immediate future? This book brings together the leading experts to examine this silent revolution at the core of US domestic policy. Mark Grady, UCLA School of Law, US Hylton's Antitrust Law and Economics brings together many of the best authors writing in antitrust today. This book represents the best in contemporary antitrust scholarship, by authors who understand and are able to communicate the centrality of economic analysis to antitrust. No antitrust lawyer, serious antitrust student, or antitrust economist should be without this book. Herbert Hovenkamp, University of Iowa College of Law, US This comprehensive book provides an extensive overview of the major topics of antitrust law from an economic perspective. A proposal for moving from price-centric to innovation-centric competition policy, reviewing theory and available evidence on economic incentives for innovation. Competition policy and antitrust enforcement have traditionally focused on prices rather than innovation. Economic theory shows the ways that price competition benefits consumers, and courts, antitrust agencies, and economists have developed tools for the quantitative evaluation of price impacts. Antitrust law does not preclude interventions to encourage innovation, but over time the interpretation of the laws has raised obstacles to enforcement policies for innovation. In this book, economist Richard Gilbert proposes a shift from price-centric to innovation-centric competition policy. Antitrust enforcement should be concerned with protecting incentives for innovation and preserving opportunities for dynamic, rather than static, competition. In a high-technology economy, Gilbert argues, innovation matters.

An excellent account of practice on both sides of the Atlantic regarding the intersection of antitrust and intellectual property rights. The author provides a detailed account of the legal discussion in an economics-informed manner. A must read, as far as I am concerned, for practitioners and academicians alike. Petros C. Mavroidis, Columbia Law School, New York, US, University of Neuchâtel, Switzerland and CEPR, UK This book examines the growing divergences between the EU and the US in their approach to antitrust law enforcement, particularly where it relates to intellectual property (IP) rights. The scope of US antitrust law as defined in the Supreme Court's decisions in *Trinko* and *Credit Suisse Securities* is much narrower than the scope of EU competition law. US antitrust enforcers have become increasingly reluctant to apply antitrust rules to regulated markets, whereas the European Commission has consistently used EU competition rules to correct the externalities resulting from government action. The contrasting approaches adopted by US and EU antitrust enforcers to these issues, as with the differences in addressing market dominance, have had a profound impact on the scope of antitrust intervention in the IP field. This book provides an in-depth analysis of the relevant recent developments on both sides of the Atlantic and identifies the pitfalls of regulating IP through competition rules. With a unique comparative perspective, this book will be an invaluable resource for postgraduate students, academics and practitioners in IP and competition law.

It is an enlarged and updated sixth edition of the highly practical guide to the leading cases of European competition law. This sixth edition focuses on Article 101 TFEU, Article 102 TFEU and the European Merger Regulation. In addition it explores the public and private enforcement of competition law, the intersection between intellectual property rights and competition law, the application of competition law to state action and state aid laws. Each chapter begins with an introduction which outlines the relevant laws, regulations and guidelines for each of the topics, setting the analytical foundations for the case entries. Within this framework, cases are reviewed in summary form, accompanied by analysis and commentary. Praise for earlier editions: 'This book should be in the library of every competition law practitioner and academic. The summary of cases is first class. But what makes it really stand out is the quality of the commentary and the selection of the material which includes not only the most important European judgements and decisions but also some of the leading cases from the US and European Member States.' Ali Nikpay, Gibson, Dunn & Crutcher LLP 'The study of EU competition law requires the analysis and understanding of a number of increasingly complex European Commission and European Court decisions. Through the provision of case summaries, excerpts from the important passages and concise commentary linking these decisions to other key case law and Commission documents, this unique and impressive book, now in its fifth edition, provides the student and practitioner of EU competition law with an extremely clear and useful introduction to these leading decisions.' Dr Kathryn McMahon, Associate Professor, School of Law, University of Warwick 'This book is especially valuable for competition law specialists in Europe and abroad who are interested in the jurisprudence and policy of the European Union and its member states. Familiarity with the European regime is essential for proficiency in competition law today, and this volume provides an excellent foundation.' William E Kovacic, Global Competition Professor of Law and Policy, George Washington University Law School, Former Chairman, US Federal Trade Commission 'The Guide is an in-

valuable tool for both students and practitioners. It provides a compact overview of the fundamental cases and highlights the essential problems in a clear and sharp analysis.' Dr Christoph Voelk, Antitrust Practice Group, McDermott, Will & Emery LLP, Brussels

For decades, the debate about the tension between IP and antitrust law has revolved around the question to what extent antitrust should accept that IP laws may bar competition in order to stimulate innovation. The rise of IP rights in recent years has highlighted the problem that IP may also impede innovation, if research for new technologies or the marketing of new products requires access to protected prior innovation. How this 'cumulative innovation' is actually accounted for under IP and antitrust laws in the EU and the US, and how it could alternatively be dealt with, are the central questions addressed in this unique study by lawyer and economist Thorsten Käseberg. Taking an integrated view of both IP and antitrust rules - in particular on refusals to deal based on IP - the book assess-

es policy levers under European and US patent, copyright and trade secrecy laws, such as the bar for and scope of protection as well as research exemptions, compulsory licensing regimes and misuse doctrines. It analyses what the allocation of tasks is and should be between these IP levers and antitrust rules, in particular the law on abuse of dominance (Article 102 TFEU) and monopolisation (Section 2 Sherman Act), while particular attention is paid to the essential facilities doctrine, including pricing methodologies for access to IP. Many recent decisions and judgments are put into a coherent analytical framework, such as IMS Health, AstraZeneca, GlaxoSmithKline (in the EU), Apple (France), Orange Book Standard (Germany), Trinko, Rambus, NYMEX, eBay (US), Microsoft and IBM/T3 (both EU and US). Further topics covered include: IP protection for software, interoperability information and databases; industry-specific tailoring of IP; antitrust innovation market analysis; and the WTO law on the IP/antitrust interface.
