The stunning new thriller from one of the fastest-growing stars of the genre. 2008: deep in the mountain forests of Wyoming, Julian Cooke stumbles across the rotting remains of a wooden wagon. He's discovered what's left of the Preston Group, a convoy of settlers that vanished in the winter of 1856. It's clear that something horrific happened here all those years ago, but Cooke can only find a few tantalising clues. 1856: as early snows descend, the eclectic group of settlers that form the Preston wagon train are forced to dig in. Miles from any kind of civilisation, they see the group of Native Americans also trapped nearby as their greatest threat. But they soon realise what true danger is. When a woman is found murdered, one of the Indian party struggles wound-

ed back to camp, whispering of unspeakable evil as he dies. United by fear, the settlers and the Indians must protect themselves against whatever is lurking in the woods. But as suspicion and panic grow, perhaps their own terror will be just as dangerous. Or maybe, whatever's out there is worse than anything they can imagine. Back in the present day, as Cooke unravels the mystery, he must question if the horror he is uncovering was in fact only the start of something much worse...

One of science's great unsung heroes, Nikola Tesla (1856-1943) was a prophet of the electronic age. His research laid much of the groundwork for modern electrical and communication systems, and his impressive accomplishments include development of the alternating-current electrical system, radio, the Tesla coil trans-

former, wireless transmission, and fluorescent lighting. Yet his name and work are only dimly recognized today: Tesla's research was so groundbreaking that many of his contemporaries failed to understand it, and other scientists are unjustly credited for his innovations. The visionary scientist speaks for himself in this volume, originally published in 1919 as a six-part series in *Electrical Experimenter* magazine. Tesla recounts his boyhood in Croatia, his schooling and work in Europe, his collaboration with Thomas Edison, and his subsequent research. This edition includes the essay "The Problem of Increasing Human Energy: With Special Reference to the Harnessing of the Sun's Energy," which anticipates latter-day advances in environmental technology. Written with wit and lan, this memoir offers fascinating insights into one of the great minds of modern science.
