Uveitis, particularly posterior uveitis, is a common cause of preventable blindness, so it is deemed a sight-threatening condition. Anterior uveitis is the form most likely to present to the emergency department. When the inflammation is limited to the iris, it is termed iritis. If the ciliary body is also involved, it is called iridocyclitis.

Uveitis is caused by disorders of diverse etiologies including wide spectrum of infectious and non-infectious causes. Often clinical signs are less specific and shared by different diseases. On several occasions, uveitis represents diseases that are developing elsewhere in the body and ocular signs may be the first evidence of such systemic diseases.

"Intermediate Uveitis," in Uveitis: Fundamentals and Clinical Practice (Philadelphia: Mosby; 2004). Fasiuddin is an assistant clinical professor in the pediatric ophthalmology service and Dr. Selvadurai is an assistant clinical professor in the retina and uveitis service; all are at the University at Buffalo, N.Y.

Uveitis: Fundamentals and Clinical Practice, 2nd edition, continues the successful tradition of the first edition with Scott M. Whitcup, MD, joining Robert B. Nussenblatt, MD, and Alan G. Palestine, MD, the authors from the first edition published 6 years earlier. Uveitis is a rapidly evolving and intellectually challenging subject.
